Responsive Web Design and Online Marketing Services

Websites act as a window into your Business. A well designed, maintained and promoted website has the capacity to generate more business and a greater awareness about the products or services you offer.

SattvaSoft offers a comprehensive web based solution including the design, construction, maintenance and hosting of your website, domain name registration and management and search engine optimisation. We are able to provide valuable statistics on your website, including hit counts, viewer information, traffic reports and search engine results.

SattvaSoft has the capacity to create almost anything you require, from a simple logo design to a complete branding solution. More often than not our customers use our graphic design services in conjunction with either our web design services or our marketing service.

Responsive Web Design

What is Responsive Web Design?

As we all know, mobile/smartphone and other handheld devices/tablets are highly popular and their use is growing every day. There is an enormous growth in this sector, not just with device specific applications for the iPhone, iPad, Android, and tablets - but also websites being made easily accessible on these devices in a usable way.

We are there to help you achieve this goal. Our elegant web site development division is capable of handling any type of requirements related to responsive web site design. We develop web sites using very popular Content Management Systems (CMS) like Wordpress, Drupal or Joomla.

Sattva Soft

What is CMS ?

A CMS platform is very important for easy content management, to improve the branding your website online as well as to provide improved customer service.

We have created multiple websites to make sure that we generate good user experience when your audience engage and interact online. Once a website is completed and online then we can also work on your banner advertising options and Google Adwords account to maximise your online budget and campaign success. As a design and development team we also work on iPad and iPhone applications and can assist in creating an application exclusively for your business. We can create your digital campaign, integrate it with your overall communications strategy and monitor its success.

Project Delivery

Customised project management and client sign off points ensure that all projects are finished to the highest possible standard, regardless of size, budget or time frame.

About Our Company

"Sattva" - the word in its essence means purity. We believe in pure and crystal clear information technology solutions for our clients and therefore we always follow the "Sattvik" approach. Our management strongly believes in "SattvaGunas" which would not be compromised in any case by the company. We have put this belief into practice in our day to day work and regular activities.

SattvaSoft is a technology management consulting company dedicated to deliver quality based services to its clients in India, Australia, UK, Singapore and other Asia Pacific. We provide Responsive Web Site Design, Web & E-Commerce Application Development and Android Based Application Development services.
